Professional Summary

I build AI products that professionals use inside their actual workflow. Currently ConsulDent, a clinical assistant for dentists — live on the App Store, in paid use, built with a practising dentist as co-founder. I work across the whole stack: Django backend, RAG pipelines, voice interfaces, and the React Native app that ships it.

Professional Experience

Founder & Engineer — ConsulDent · [App Store](#) · Jan 2024 – Present

A clinical AI assistant for dentists. Live on the App Store, ~50 dentists across three test cohorts, payments running. Built with a practising dentist as co-founder. I own it end-to-end: the mobile app, the Django backend, the retrieval system, and the product decisions in between.

- **React Native app on the App Store** — hands-free voice capture for use during treatment, structured document output, in-app purchases via RevenueCat with webhook-driven entitlements. Shipped through App Store review and iterated with live cohorts on TestFlight.
- **RAG pipeline** over a curated corpus of dental guidelines and textbooks — structure-aware chunking, multi-query retrieval, inline source citations, and a rule that a claim without a source doesn't ship.
- **Bilingual retrieval** — Turkish clinical questions rewritten into English search queries, answers composed back in Turkish with terminology intact.
- **Deterministic drug dosing** against a hand-verified database, deliberately kept outside the language model.
- **Django backend** serving both the mobile app and a web panel over a JWT-authenticated JSON API; Postgres with pgvector on Supabase.
- **Rewrote the first agentic pipeline** (~3,000 lines) down to a fifth of its size, cutting latency while keeping schema validation where it mattered.

Network Engineer – Türk Telekom Dec 2021 – Present

Carrier-grade infrastructure on Nokia and Huawei platforms, plus the internal software the network work needs.

- Python/Netmiko automation for device provisioning and troubleshooting
- .NET application for enterprise customer fault tracking
- MPLS service configuration (VPRN, IES), service validation, failure analysis
- VLAN, BGP and TCP/IP configuration and optimization

- Traffic and service-behaviour analysis for performance and stability (Pandas, NumPy, scikit-learn)

Earlier projects 2024 – 2025 ([Both write-ups here](#))

Mulakat.pro (2025) — interview preparation built on CV/job-post gap analysis, solo. Stopped: the bottleneck in the market was getting interviews, not preparing for them.

- **MentAI** (2024) — personalized mentorship app, seven-person team. Stopped after MVP testing; the need we had designed for wasn't there.

Earlier Experience

Teaching assistant at Miuul (Python, SQL, ML, A/B testing) · Data science intern, IoT anomaly detection with LSTM · Data analyst intern in Morocco — automation and reporting (40% time reduction) · BAP scholar.

Education

- **B.Sc. Electrical & Electronics Engineering** — Yaşar University, 2021 100% scholarship · GPA 3.42/4.00 [IEEE Paper](#)
- **B.Sc. Energy Systems Engineering** — Yaşar University, 2020 GPA 3.72/4.00, highest in cohort

Technical Skills

- **Mobile** React Native · App Store release and review · TestFlight · RevenueCat
- **Backend** Python · Django · FastAPI · REST APIs · PostgreSQL · Docker · Git
- **AI systems** RAG architecture · Agentic workflows · OpenAI APIs · LangChain/LangGraph · Whisper · pgvector · Supabase
- **Infrastructure** Google Cloud · Render · CI/CD
- **Network** Python automation (Netmiko) · MPLS (VPRN, IES) · BGP · TCP/IP
- **Also** .NET · Pandas · NumPy · scikit-learn

Certifications & Training

- **Production-Level Data Science** — Miuul (*PostgreSQL, Docker, MLops*)
- **Data Science** - Dataquest
